Hygienic, clean

commercial shrimp supplier in Greetsiel relies

The de Beer GmbH & Co Krabbenhandels KG, based in Greetsiel, is Germany's largest distributor of shrimps. Its produce is caught by a total of 34 cutters that fish exclusively on the company's behalf. De Beer's 15 refrigerated lorries deliver the "North Sea shrimps" – fresh as well as frozen – to fishmongers, hotels, supermarkets, wholesalers and manufacturers of delicatessen products: first-class quality guaranteed. Hygiene and cleanliness in their manufacturing operations – not to mention on the

floor – go without saying. The new manufacturing hall was built on company premises in Greetsiel at the beginning of 2011. Because de Beer wanted the new facilities to be equipped with the same high quality flooring which has been proved succesfully in the existing halls, the shrimp distributors decided again on a Silikal reactive resin floor.

The new floor, with a surface of 1,800 m², was applied with resins based on methyl methacrylate (MMA): in the preparation rooms,

cold rooms and packing stations, as well as in the hallways and aisles, palletising area and beneath the box wash system. Crucial for the company and its sensitive products is still the sealed, seamless surface that makes the floor hygienically impeccable and safe. The new processing hall fulfils the strictest hygienic requirements.

Therefore, it was also essential that the more than 100 running metres of stainless steel

and durable:

on reactive resin floors made by Silikal

drain channels and various gullies had to be integrated with technically skilled craftsmanship. Coving placed along the skirting protection also ensures a leak-proof connection to the wall. As a result, the MMA flooring which can stand cleaning agents, salt water, shrimps and fish can also be flooded once in a while.

can also withstand heavy loads: It can safely stand handlift trucks and forklifts that transport the shrimps. Thanks to the rapid hardening time of just one hour, the subsequent works during the new construction did not have to be held up for long.
