Flooring from Silikal: Safety for senior citizens

Non-slip, optically appealing and resistant, even against extreme temperature fluctuations: Silikal coating systems create a lasting, reliable base in care centers and living units for assisted living.

Safety and reliability .

Installed over night: Attractive and non-

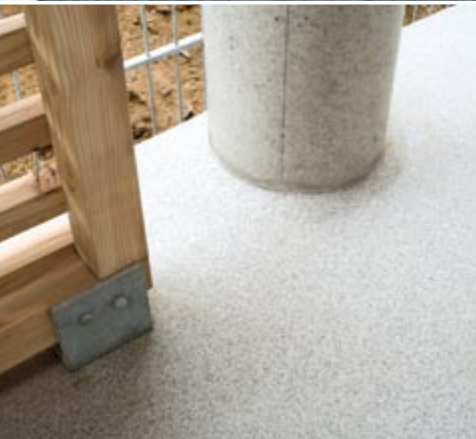

Skillfully applied by qualified installers and the new floor is fully cured and ready for action within one hour. A perfect way to keep your operation running wide open.

Coloured and frost resistant for arcades, stairways, balconies and kitchens. Constantly increasing demands are being placed on care facilities or senior citizens' assisted living facilities. For current new building and renovation measures the attention is focused on safety, load capacity and a welcoming appearance. Especially here, with their extreme load possibilities and enormous versatility, flooring systems from Silikal clearly prove what their worth. The coatings really demonstrate their potential in indoor and

outdoor areas, arcades and kitchens, on terraces and stairways, balconies and storage areas.

Non-slip

Especially important for older persons: a high degree of standing security. Silikal flooring achieves this by adding quartzes to the mixture. Slip resistance levels of "R11" or even "R12" are possible. At the same time the floor proves to be particularly wear and abrasion resistant.

.. from the bottom up!

slip flooring for assisted living facilities

Easy-care

The seamless floor for senior citizen areas is quick and easy to clean. The surface is resistant against most greases, oils, salts and other aggressive substances.

Temperature resistant

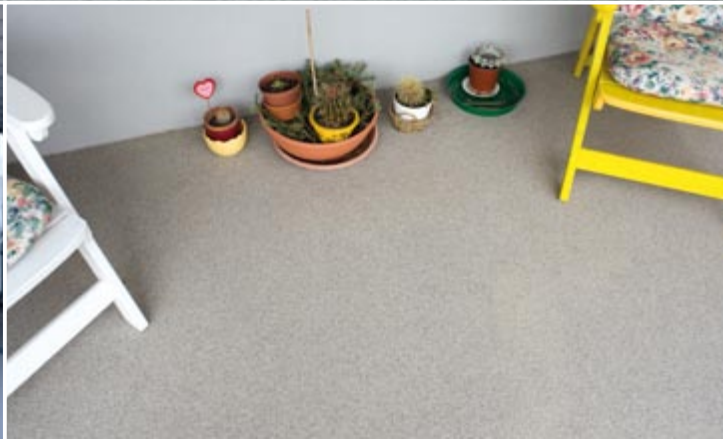

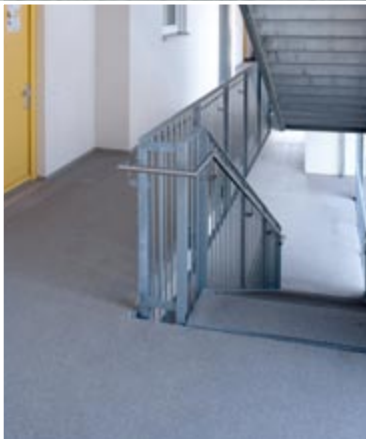

Crucial in outdoor areas: the high temperature resistance of the coating. In all of the senior citizen facilities shown here the flooring installation company used the "Silikal RV 368" system, a particularly flexible resin. It withstands even unusually cold and thermal stresses of -20 °C to +50 °C.

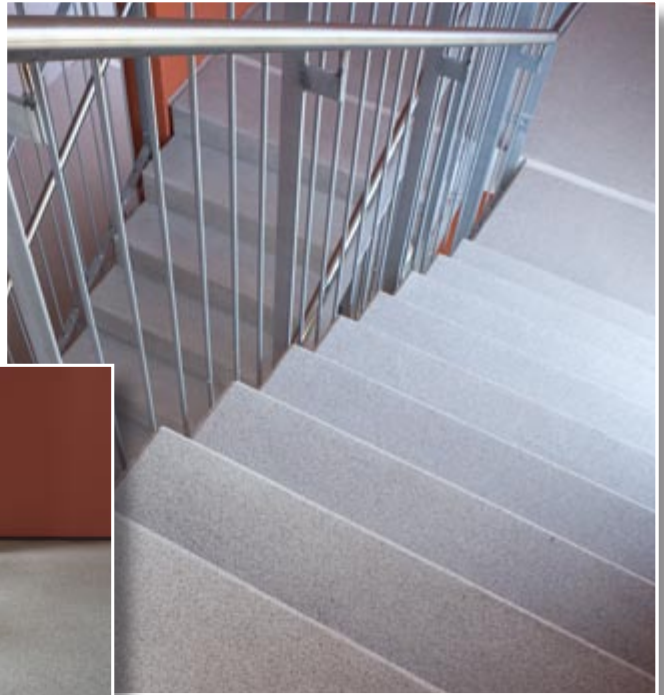

Coloured

Whether matching the orange-red facade or preferably more reserved in silvery light gray, Silikal flooring meets almost all colour requests. Blends of various coloured quartzes create vivid impressions, according to each individual taste.

Fast

In no time the new coatings are applied and floors ready to use again. This too a key advantage for care facilities. During the renovation phase there is hardly any interference for the staffs or the residents of the facilities. Approximately 2 hours after the floor has been installed it is already fully loadable again.

Your call – Silikal!
An overview of the advantages.

Hygienic and clean ...

- Monolithic, seamless surface
- Resistant to alkalis, acids, greases, oils, salts and other aggressive media
- Easy to take care of

Safe ...

- Anti-skid surface grades
- Wear and tear resistant
- Can withstand hot and cold

Quick and beautiful ...

- Extremely short curing times; no interruptions in business when renovations are made!
- Easy to lay, even at temperatures below zero
- Selection of appealing colours, e. g. with coloured quartz sand or flakes mixtures as standard
